github.com/devasheesh1112 | HackerRank/devasheesh

Skills

Programming Languages	Python, C, C++, SQL, JavaScript
AI/ML Frameworks & Libraries	PyTorch, TensorFlow, Transformers, LoRA, LLMs, NLP, Model Deployment
Tools & Databases	PostgreSQL, MSSQL, ChromaDB, Git, Docker, JIRA, Azure Data Services
Web Frameworks	Flask, Django, Streamlit, FastAPI, LangChain
Soft Skills	Problem Solving, Team Leadership, Project Management, Communication

Education

National Institute of Technology (NIT Bhopal)	Bhopal, MP, India
Master of Technology – Computer Science and Engineering	July 2024 – May 2026
Lakshmi Narain College of Technology Bhopal	Bhopal, MP, India
Bachelor of Technology – IT Engineering	July 2017 – Aug 2021
Private Candidate (C.B.S.E.)	Madhya Pradesh, India
12th (Higher Secondary) & 10th (Senior Secondary)	April 2015 – June 2017

Experience

CoreCard Software Inc.	Dec 2021 – Nov 2023
Associate Software Developer	Mumbai, India
- Resolved 200+ sentry errors and bugs through debugging and troubleshooting, resulting in a 95% reduction in error occurrences. - Developed and maintained Stored Procedures minimizing time complexity, ensuring customer satisfaction of 82%+. - Played a crucial role in the productization initiative, optimizing code and APIs, developing an adaptable solution that satisfied 60% of clients. - Took ownership of the User Management System, resolved critical P0/P1 bugs, and conducted comprehensive code refactoring.	

Projects

YouTube-RAG Chatbot Python, Flask, LangChain, Google Gemini, ChromaDB	 GitHub
- Built an AI-powered RAG chatbot enabling users to query any YouTube video using LangChain LCEL pipelines, Google Gemini LLM, and Gemini Embedding API for accurate context-aware responses. - Designed modular pipelines for transcript extraction, text chunking, semantic vector indexing via ChromaDB, and retrieval-augmented generation supporting large video transcripts. - Deployed a Flask web app with real-time chat UI featuring Hindi-to-English auto-translation, multi-language transcript support, and live deployment on Render.	
CottonVLM-Diag: Multimodal VQA Dataset & Fine-tuning BLIP, LoRA, PyTorch, Gemini API	
- Compiled a cotton leaf disease image dataset combining field-collected images with Kaggle sources, paired with farmer-consulted diagnostic details for label accuracy. - Leveraged Gemini API to structure diagnostic details into an English visual question-answering dataset with image-question-answer triplets. - Fine-tuned BLIP VLM using LoRA (Low-Rank Adaptation) on the curated dataset, adapting the model to agricultural domain queries with reduced trainable parameters. - Benchmarked fine-tuned model against GIT-Base and LLaVA-1.6 baselines to evaluate diagnostic performance.	

Publications and Certificates

- Conference/Workshop Paper:** Automation to Forest Fires using Bolt Cloud Platform.
- Certification:** Microsoft Azure Cloud Essentials – GreatLearning, 2023
- Certification:** SQL for Data Science – Coursera, 2022
